

Less busywork. *More possibility.*

Practical workflows, organized data and a thoughtful handoff. I help connect tools and simplify repetitive digital tasks.

SERVICES

AI-assisted automation / n8n / API integration

Excel and Google Sheets / Web scraping to CSV

WordPress support / Chatbot workflows

These samples were created with AI assistance for this portfolio. They are not paid client projects, certifications or claims of past commercial results.

- 01 Data cleanup**
Validate, normalize and deduplicate.
- 02 Lead routing**
Prepare a structured, reviewable handoff.
- 03 Content brief**
Create a draft-only JSON specification.

From messy rows to usable data.

A working browser-based demonstration. No file uploads or external services are involved.

BEFORE / FOUR SYNTHETIC INPUT ROWS

Maya Chen , MAYA@EXAMPLE.COM

Leo Tan, leo@example.com

Maya Chen, maya@example.com

Sam Lee, not-an-email

AFTER / TWO VALID ROWS

Maya Chen | maya@example.com

Leo Tan | leo@example.com

1 duplicate removed / 1 invalid row excluded

Implemented: trim fields, lowercase email addresses, validate email format, deduplicate by email and download a CSV with spreadsheet-formula protection.

Boundaries: simple three-field comma-separated rows, up to 100 rows. No quoted commas. Email checks verify formatting, not deliverability. Counts refer only to this sample.

An inquiry. A clear next step.

A rule-based workflow simulation inspired by automation use cases. Not a live n8n integration.

01 / INPUT

Synthetic inquiry

Choose Automation, Data cleanup or WordPress support.

02 / ROUTE

Match the service

Prepare the corresponding service queue.

03 / REVIEW

Human handoff

Request scope and sample inputs before proceeding.

Demonstrated: deterministic routing, a visible sequence and an explicit human-review gate. The visitor can change the request category and rerun the simulation.

Production requirements: agreed routing rules, authorized account access, error handling and end-to-end testing. This demo does not create leads or send messages.

A brief your workflow can use.

A template-based JSON generator with draft-only publishing and a mandatory review checklist.

SAMPLE OUTPUT / JSON

```
{
  "sample": true,
  "output": "Draft for review",
  "publish_automatically": false,
  "review_checks": [
    "Check facts against sources",
    "Check formatting",
    "Get client approval"
  ]
}
```

WHAT THIS SAMPLE DOES

Accepts a request, wraps it in a consistent JSON structure and lets the visitor download the brief. Supplied source notes and human review remain explicit requirements.

WHAT IT DOES NOT CLAIM

It does not call an AI model, generate a finished article, connect to WordPress or publish content. A production integration would be a separate, agreed project.
